SYED SAFEER

AZURE CLOUD ADMINISTRATOR

SKILLS

- Azure IaaS.
- Azure PaaS.
- User and Guest User Management.
- Tenant management.
- Multi-Factor Authentication (MFA).
- Group Management.
- License and Role Administration.
- Service Principal and Conditional Access.
- Privileged Identity Management (PIM).
- Custom Domains and Password Reset.
- Azure AD Connect.
- Azure VM and VMSS.
- Device and ADDS Overview.
- Service Lifecycle.
- Subscription Management.
- Cost Management.
- App Service.
- Management Groups.
- Key Vault.
- Encryption of Disks.
- Azure Managed Identities.
- Load Balancer.
- Application Gateway.
- WAF (Web Application Firewall).
- Traffic Manager.
- Azure Front Door.
- Virtual Machine Scale Sets.
- Monitoring and Backup.
- Azure Monitoring.
- Azure Storage Account.
- Recovery Service Vault.
- Azure SQL Database.
- Azure Migrate.
- Network Infrastructure.
- Bastion Host and Azure Firewall.
- Azure VPN and ExpressRoute.
- Hub-spoke Network Topology in Azure.
- Development and Automation.
- Static Web Apps.
- Azure HA and DR Solutions.
- Single-Sign-On (SSO).
- Access Management.
- PowerShell (Basics).
- Azure Landing Zone.
- GitHub. (Basics)
- Automation Account. (Basics)
- Docker Containerization. (Basics)
- Cosmos DB. (Basics)
- Azure Function. (Basics)
- Azure Terraform. (Basics)
- Azure Kubernetes. (Basics)
- Azure DevOps (Basics).
- Azure administration.
- Azure Security.
- Server installation.
- Windows Server.
- LINUX Server.

PROFESSIONAL PROFILE

Dedicated and skilled Azure Administrator with over **5+** years of hands-on experience in managing cloud infrastructure. Proven expertise in the implementation, and optimization of various Azure services. Adept at navigating Azure Active Directory, Subscription management, Virtual machines, Storage Account, Security, Networking and a broad range of Azure services. Demonstrated ability to implement best practices for security, performance, and cost management. Seeking opportunities to contribute technical skills

WORK EXPERIENCE

- **Kiya.ai: February 2025 – Present (Navi Mumbai, Maharashtra)**
Position: Associate Consultant of Cloud

Roles and Responsibilities

- Managing and administering Azure infrastructure including Virtual Machines, Storage Accounts, and Networking components.
- Proactively troubleshooting and resolving issues in the Azure environment related to VM availability, storage, and networking configurations.
- Handling patch management for both Windows and Linux servers to maintain system integrity and security compliance.
- Participating in cross-cloud operations by managing AWS infrastructure along with Azure services.
- Led AWS-to-Azure migration initiative by strategizing and executing migration plans for virtual machines and services, minimizing downtime.
- Recommended and implemented a cost-optimized solution by archiving AWS EC2 data to Amazon S3 Glacier Deep Archive before decommissioning the EC2 instances.
- Conducted RCA (Root Cause Analysis) for a critical web application issue where APIs were unexpectedly stopping; identified idle timeout settings as the root cause and successfully resolved the issue by modifying timeout configurations.
- Resolved several critical issues across Azure infrastructure, enhancing service uptime and reliability.
- Contributed to data protection strategies using Azure Backup and Recovery solutions.
- Actively collaborated with internal teams for infrastructure improvements and provided guidance on best practices in cloud administration.

- **LTIMindtree: January 2024 – November 2024 (Hyderabad, Telangana)**
Payroll Company: Swift Staffing Solution

Position: Azure Cloud Engineer (ABRS - Azure Backup and Recovery Specialist)
Project: Microsoft.

➤ **Roles and Responsibilities:**

- Utilize expertise in Azure Backup and Recovery services to address client issues promptly and efficiently.
- Collaborate closely with clients to understand their backup and recovery requirements and provide tailored solutions.
- Troubleshoot backup and recovery issues, utilizing thorough analysis and diagnostic techniques to identify root causes.
- Proficiently employ Kusto Query Language (KQL) to analyze logs and pinpoint underlying issues in Azure environments.
- Interpret log data effectively to diagnose problems and formulate comprehensive solutions for clients.
- Demonstrate mastery in executing backup procedures on the Azure platform, ensuring data integrity and reliability.

EDUCATION

Graduated: 2021 - BCS (Bachelor of Computer Science) - DR Babasaheb Ambedkar Marathwada University, Aurangabad, Maharashtra.

HSC: 2016 (Maharashtra State Board of Secondary and Higher Secondary Education, Pune).

SSC: 2014 (Maharashtra State Board of Secondary and Higher Secondary Education, Pune).

Certifications

Az – 104:

<https://learn.microsoft.com/api/credentials/shar/e/en-us/SyedSafee-6288/EF097D61435ECBCC?sharingId=375BE7B54AA1AB12>

LANGUAGES

- English.
- Hindi

- Implement efficient restore strategies to swiftly recover data as per client requirements, minimizing downtime and data loss.
- Specialize in ASR (Azure Site Recovery) for seamless replication and disaster recovery planning on Azure.
- Configure and manage ASR solutions to replicate critical workloads and ensure business continuity in the event of outages or disasters.
- Conduct regular testing and validation of ASR configurations to guarantee readiness for failover scenarios.
- Utilize Azure Migrate tool to facilitate smooth migration of workloads from on-premises environments to Azure Cloud.
- Lead migration projects, assessing workload compatibility, planning migration strategies, and executing migrations with minimal disruption.
- Provide technical guidance and support to clients throughout the migration process, ensuring successful outcomes and minimal risk.
- Possess in-depth knowledge and expertise in managing both Windows and Linux operating systems in Azure environments.

• Jetto Technologies and Consultancies: October 2020 – January 2024

Role: Azure Cloud Administrator.

Roles and Responsibilities:

- Worked on Azure Cloud environment to deploy, delete, troubleshoot, administration of different types of IaaS and PaaS resources.
- Orchestrated Azure AD tenant management, implementing MFA, Identity Governance, and Conditional Access policies for adaptive access controls. Executed Custom Domain configurations, optimized password reset processes, and ensured seamless on-premises AD synchronization using Azure AD Connect.
- Administered user, groups, licenses, and roles, ensuring proper access controls and permissions across the organization.
- Monitored and analyzed Azure Subscription Activity Logs, identified and resolved issues promptly.
- Applied Identity and Access Management (IAM) best practices, defined roles and permissions to ensure a secure and compliant environment.
- Utilized tags and implemented cost management strategies, optimized resource allocation and minimizing unnecessary expenses.
- Having excellent understanding of Azure Regions, Availability Zones and Availability Sets Architecture.
- Deployed and configured Azure Virtual Network Solution like, Virtual network, Virtual Network Peering, Subnets, Network Interface Card and NSG-Network Security Groups, NAT Gateways to enable seamless communication between Azure- resources.
- Implemented and managed Private DNS zones for internal domain resolution, enhancing network security, and configured Public DNS for external domain resolution to ensure seamless communication with external services.
- Deployed secured and isolated application using Azure App Service Environment.
- Extensive experience in Deployment, Configuration and Management of Windows and Linux Virtual Machines as well as Azure Virtual Machine Scale Set for auto scaling.
- Configured Azure Monitoring Solutions for different types of Azure Resources using Azure Monitor, Log Analytics Workspace, and Diagnostic Extension.
- Implemented High Availability using Standard and Basic Load Balancers and configured Application Gateway and Web Application Firewalls (WAF) for enhanced security and high availability.
- Worked on highly secured environment by using Azure Firewall, Network Security Groups, Key Vault and Azure Disk Encryption.
- Implemented Key Vault for secure storage and management of sensitive secret information, ensuring encryption of disks and maintaining data integrity.
- Deployed Azure Landing Zones, providing a standardized and scalable foundation for workloads.
- Experienced in securing environments by using Private Endpoints to configure and route traffic privately for Virtual Machines, Storage accounts, Key vaults and other PaaS services.
- Managed and Deployed Azure Storage Account Containers with Blob and File Shares, and implemented backup solutions through the Recovery Service Vault.

- Deployed and Configured Disaster Recovery Solutions for Azure environment by using Azure Recovery Vault for Backup and Replication.
- Configured and optimized Azure Route Tables to control traffic flow within the virtual network, ensured route prioritization and path selection to ensure efficient data transmission.
- Implemented and enforced Azure Policy, ensuring compliance with organizational standards and security protocols.
- Leveraged Azure Managed Identities for streamlined authentication between azure resources and authorization processes.
- Utilized Traffic Manager and Azure Front Door for efficient global traffic distribution.
- Administered Azure SQL Database, ensuring efficient data management and performance optimization.
- Configured and deployed Azure Point to Site, Site to Site VPN and ExpressRoute connections, to establish connectivity with on-premises network, ensured secure and reliable connectivity.
- Configured and maintained Bastion Hosts and Azure Firewall to secure network access.
- Implemented Hub-spoke network topology in Azure, optimizing network efficiency and performance.
- Developed PowerShell scripts for automation, optimizing and streamlining routine administrative tasks.
- Contributed to the implementation of Static Web Apps, ensuring efficient and secure deployment.
- Hand on experience to modernize, refactor and migration of application over Azure using cloud native services like Azure App Service and Azure Database Solution.
- Good knowledge of migration from On-premises systems and application to Azure using Azure Migrate Service.
- Effectively managed SSL certificates, guaranteeing the security of data in transit.
- Experienced in understanding and deploying High-Level and Low-Level Design, and overseeing security considerations as part of wider Cloud Adoption Framework.
